East Jakarta

I am an experienced full-stack developer specializing in creating scalable and efficient web applications and software solutions. As an active student at Indraprasta PGRI University, I am continuously enhancing my skills in computer science and emerging technologies. I am adept at addressing challenges that arise during the development process and finding effective solutions. Additionally, I excel in collaborative environments and enjoy engaging in discussions to determine the best approaches for completing each project.

Work Experiences

PT Digital Nusantara Sinergi - Center Jakarta Sep 2023 - Present

Fullstack Developer - Contract

- Performed maintenance and enhancements on existing applications to ensure stability and optimal performance.
- Engaged in discussions and designed business workflows and development strategies to support company needs.
- Collaborated with business partners and external companies to execute joint projects effectively.
- Coordinated with internal teams to achieve project goals while adhering to established standards and timelines.
- Communicated effectively within the team and across departments to ensure smooth workflows and task completion.

PT Tiara Kencana - South Jakarta Sep 2022 - Nov 2022

Web Developer - Freelance

- Developed web applications and provided APIs to support mobile applications.
- Collaborated with the team to meet client requirements and requests.

PT Solusi Intek Indonesia - Bekasi Jan 2022 - May 2022

Web Developer - Internship

- Provided support to employees in completing assigned projects.
- Developed websites from scratch based on defined requirements and specifications.
- Collaborated and coordinated with the team to ensure smooth project execution.

Educations

Indraprastra PGRI University - East Jakarta Sep 2023 -

Undergraduate Informatics Engineering, 3.66/4.00

- Studied fundamental database concepts, including structured data design and management.
- Explored programming logic and algorithms to solve various computational problems.

SMKN 10 Jakarta - East Jakarta Jun 2020 - May 2023

Vocational High School Software Engineering

- Learned the basics of web development.
- Gained knowledge in database normalization and management using relational database systems.
- Explored object-oriented programming concepts.
- Developed foundational skills in IT troubleshooting and networking.

Projects

IdSmartCare Jun 2024 - Present

Fullstack Developer

IdSmartCare is an application designed to streamline the buying and selling process of goods, as well as manage inventory within healthcare facilities. This application enables users to efficiently manage stock levels, track inventory in real-time, and facilitate transactions with ease. Additionally, IdSmartCare seamlessly integrates with several third-party services, enhancing its functionality and ensuring smooth data exchange across platforms. The system aims to enhance operational efficiency in inventory management, ensuring the timely availability of goods while optimizing the transactional processes within healthcare environments.

Content Management System - Asuransi MAG Aug 2024 - Dec 2024

Web Developer

Content Management System - Asuransi MAG is a custom-built application designed to manage content efficiently, where the content is consumed through an API that I developed. The system allows users to create, update, and organize content seamlessly, ensuring smooth integration with the API for dynamic content delivery. This project aims to provide an intuitive platform for managing insurance-related content, ensuring that data is consistently available and easily accessible for external consumption in a structured and organized manner.

- PIC : Diah Anggraini - 08174858719

Workspace

Nov 2023 -

Web Developer

Workspace is an internal application designed to streamline various administrative and operational tasks within the office. The platform provides functionality for employee attendance tracking, data management, reimbursement processing, task management, and event coordination. By centralizing these processes, Workspace enhances organizational efficiency, ensuring smooth workflow and effective communication within the workplace. The application aims to simplify day-to-day operations, allowing employees and management to focus on their core responsibilities.

QR Code Registration

Jan 2023 -

Web Developer

QR Code Registration is an application designed to streamline the registration and ticket management process using QR code technology. This application has been utilized for various events, including the graduation ceremony of SMKN 10 Jakarta at 2023 and competitions organized by Ayo Bisa Indonesia. With its QR code scanning feature, the application enables fast and accurate ticket verification, ensuring an efficient registration experience for participants. QR Code Registration aims to enhance convenience and speed in event management through modern technology.

Salesman Report

Nov 2022 -

Web Developer

Salesman Report is an application designed to facilitate the reporting of pharmacy sales activities by the sales team. This application integrates with a mobile app, enabling sales personnel to easily record and submit reports directly from their devices. The data submitted via the mobile app is stored and managed within this system, providing real-time access for management to monitor sales performance and make data-driven decisions. Salesman Report aims to improve reporting efficiency, ensure data accuracy, and support more effective business strategies.
